

Children Needed for Research Study about Language and Social Skills

Who could participate? Boys and girls, ages *5 to 7 years*.

What will my child do? Participation in the study requires 1 two-hour test session with breaks as needed. Children will receive several language assessments, listen to stories, and answer questions about the stories. Sessions can be scheduled after school or on Saturdays.

What about parent involvement? Parents will be asked to complete two brief questionnaires about children's language and social skills.

What will my family receive? Children will receive a \$20.00 gift card from a local store. Parents will receive a brief clinical report summarizing their child's performance on the language measures. Free parking passes will be provided if needed.
