
Summary

Debunking Common Hearing Aid Selection and Fitting Myths will highlight common statements and practices in the clinics of North America. Based loosely on the popular Discovery channel program, The Mythbusters, attendees will be encouraged to identify gaps in their own practice and take information from this course to narrow those fitting gaps, with an emphasis on evidence-based practice and delivering outstanding care to patients in need of hearing aids.

Learning Outcomes

At the conclusion of this workshop, participants will be able to:

1. Use evidence-based principles to make better clinical decisions
2. Identify at least three clinical tests to be used during the hearing aid selection and fitting process in which clinical research supports their use.
3. Debunk three or more hearing aid fitting and selection myths using clinical research studies
